# WHY DEVOPS?

TRADITIONAL SOFTWARE LIFECYCLE DEPLOYMENT:

**WORKED FINE IN  
DEV**

**OPS PROBLEM NOW**

---

## DEV / APPLICATION OUTCOMES

- ▶ 28% improvement in developer productivity
- ▶ 30% reduction in overall development costs
- ▶ 48% increase in application quality

Source: 2017 State of DevOps Report

---

## OPERATIONS OUTCOMES

- ▶ **Deploy 46X more frequently** -- meaning they deploy multiples times per day instead of once a week or less.
- ▶ **Deploy 440X faster** -- meaning they have lead times of less than an hour instead of more than a week.
- ▶ **Recover from downtime 96X faster** -- meaning they recover in less than an hour instead of days.
- ▶ **5X lower change failure rate** -- meaning changes to production fail 7.5% of the time instead of 38.5%.

## 2X MORE LIKELY TO ACHIEVE / EXCEED OUTCOMES

- ▶ Quantity of products or services.
- ▶ Operating efficiency.
- ▶ Customer satisfaction.
- ▶ Quality of products or services provided.
- ▶ Achieving organizational and mission goals.

# WHAT IS DEVOPS?

### ► **Wikipedia:**

DevOps (a clipped compound of "software DEVelopment" and "information technology OPerationS") is a term used to refer to a set of practices that emphasize the collaboration and communication of both software developers and information technology (IT) professionals while automating the process of software delivery and infrastructure changes.[1][2] It aims at establishing a culture and environment, where building, testing, and releasing software can happen rapidly, frequently, and more reliably.[3][4][5]

### ► **Amazon:**

DevOps is the combination of cultural philosophies, practices, and tools that increases an organization's ability to deliver applications and services at high velocity: evolving and improving products at a faster pace than organizations using traditional software development and infrastructure management processes. This speed enables organizations to better serve their customers and compete more effectively in the market.
